Desk Height

Up Down   **Four Memory Height**
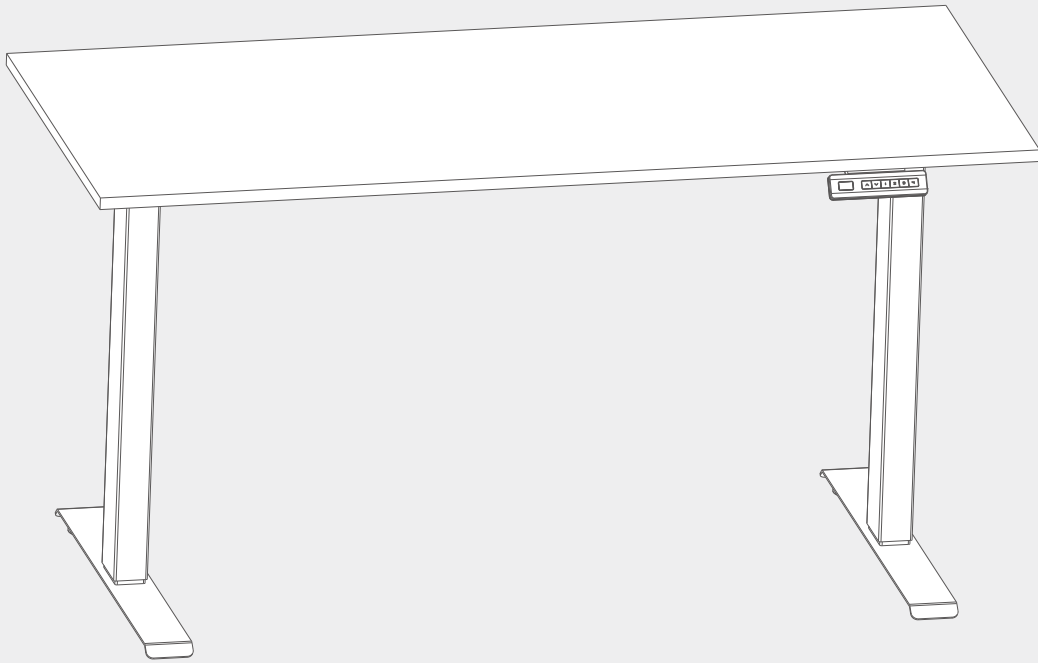

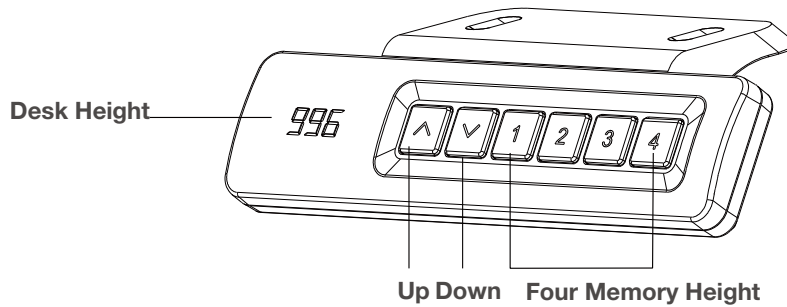

Note
1. Please make sure no obstacles during up and down.
2.Don't make the desktop attach to wall.

Suggestion
Set height 1 as the most comfortable height when you sitting; set height 2 as the most comfortable height when you standing; set height 3 and height 4 as what you needed.

1. lifting function:
Press and hold the " ∧ " button, the desk goes up, press and hold the " ∨ " button, the desk goes down, and release the button to stop.

2. Memory position function:
Press and hold the ①/②/③/④ button for 3 seconds, the number on the display will flash 3 times and then stop ashing, indicating that the memory position is stored successfully.

3. Set the lower limit:
After adjusting the height of the desk, press and hold the " ∨ " and ① buttons together for 3 seconds, and "-dO" appears on the display, indicating that the lower limit is set successfully.

4. Set the upper limit:
After adjusting the height of the desk, press and hold the " ∧ " and ① buttons together for 3 seconds, and "-UP" appears on the display, indicating that the upper limit is set successfully.

5. Cancel the lower limit:
When the lowest point display shows "-LO", press the " ∨ " and ① buttons together for 3 seconds, after the display flashes "-dO", the lower limit is canceled.

6. Cancel the upper limit:
When the highest point display shows "-HI", press the " ∧ " and ① buttons together for 3 seconds, after the display flashes "-UP", the upper limit is canceled.

7. Locking:
In normal operation mode, press and hold the ① and ② buttons together for 3 seconds, LOC will appear on the display, and the handset is successfully locked.

8. Unlock:
In the LOC locked state, press and hold the ① and ② buttons together for 3 seconds, the display will re-display the number, and the handset is successfully unlocked.

9. Reset:

The system needs to be reset under certain circumstances. Include:

①When using for the first time, power on the system and enter the reset state.

②Active reset to enter the reset state.

③The system is abnormal and enters the reset state.

Operation: Long press the " " button to lower the desk to the lowset, then release the button and then press the " " button for 5 seconds, the handset will display "RST", release the button and long press the " " button until the display shows numbers.

10. Switching between centimeters and inches:

press and hold the ① and ③ buttons for 3 seconds, and the digital display unit completes the switching.

11. Set anti-collision sensitivity:

In the normal operation mode, press and hold the ① and ④ buttons for 3 seconds together, the display will display "S0X" and flash (X indicates the current sensitivity gear), at this time, adjust through " ︿ " and " ︶ " buttons, after the adjustment is   completed, press and hold ① and ④ buttons for 3s together, the display will stop flashing and return to normal altitude display after 3s.

There are 4 levels of sensitivity:

1 - very sensitive

2 - Fairly sensitive

3 - insensitive

0 - no sensitivity

12. Motor overcurrent protection:

the display shows E01. When the desk is under overcurrent protection, it can be actively reset, and the desk can be used normally after the reset operation is completed.

13. Working system protection:

The display shows H01. When the desk enters the working mode protection, it needs to wait for 1-17 minutes and 30 seconds before resuming work. When the height is displayed on the handset, the desk can operate normally.

14. Error protection:

First, manually eliminate whether there is any abnormality in the desk, and then reset it. If the desk has been found to be tilted or tilted during operation, immediately stop the operation and contact the after-sales personnel to deal with it.
